REQUEST FOR INFORMATION ON USE OF ICPSR RESOURCES

To provide funding agencies with essential information about use of archival resources and to facilitate the exchange of information about ICPSR participants' research activities, users of ICPSR data are requested to send to ICPSR bibliographic citations for each completed manuscript or thesis abstract. Please indicate in a cover letter which data were used.

DATA DISCLAIMER

The original collector of the data, ICPSR, and the relevant funding agency bear no responsibility for uses of this collection or for interpretations or inferences based upon such uses.

DATA COLLECTION DESCRIPTION

Janet B. Hardy and Sam Shapiro

PATHWAYS TO ADULTHOOD: A THREE-GENERATION URBAN STUDY, 1960-1994: [BALTIMORE, MARYLAND] (ICPSR 2420)

SUMMARY: This collection incorporates both prospective and retrospective data on three generations of families initially living in inner-city Baltimore, Maryland. The prospective data were selected from data collected as part of the Johns Hopkins Collaborative Perinatal Study (JHCPS), a survey of pregnant women seeking prenatal care and delivery at John Hopkins Hospital during 1960-1964. JHCPS studied these women (the first-generation mothers, abbreviated as G1) and the children born to them during 1960-1965 (the second-generation children, abbreviated as G2) until the children were 8 years old. The retrospective data come from a follow-up study, conducted in 1992-1994, of G1, G2, and the children born to G2 (the third-generation children, abbreviated as G3). Data from JHCPS on G1 include obstetrical and reproductive history at registration for prenatal care, sociological/family history variables at or around delivery of G2, observations of mother with child when G2 was 4 months old and 8 months old, and family history, demographic, and sociological variables when G2 was age 7. For G2, the data from JHCPS include delivery room observations at birth; pediatric examination data at age 4 months; developmental evaluation data at age 8 months; pediatric-neurological examination data at age 12 months; language, hearing, and speech evaluation summary data at age 36 months; psychological, behavior profile, physical growth, and other tests at age 48 months; psychological, motor, behavior, neurological, vision, physical, and other tests at age 7-1/2 years; and language, hearing, and speech evaluations, physical growth, interval medical history, and other tests at age 8 years. Retrospective data from the follow-up study on G1 include variables on education, employment, family composition, health and health care usage, housing conditions, income and income sources, marital status, partnerships and changes, neighborhood characteristics at registration to JHCPS and current, and reproductive history. For G2, data from the follow-up include information on aspirations, education, schooling, employment, family composition, health and health care usage, housing conditions, income and income sources, legal problems, living arrangements, marriage, partnership and changes, neighborhood characteristics at birth, at ages 11/12 and 16/17, and current, reproductive history, social relationships, smoking, and substance abuse. Data for the assessed third-generation children, i.e., G3s who were 7-8 years old during the follow-up period, include information on cognitive development,

academic achievement and behavior, prenatal care, health, day care, and parental aspirations.

UNIVERSE: Pregnant women seeking prenatal care and delivery at Johns Hopkins Hospital during 1960-1964, their children, and their children's children.

SAMPLING: G1s were selected for JHCPS on the basis of the last digit of their hospital history number at John Hopkins Hospital, which was assigned from a central hospital file at the point of first patient contact. The sample size was increased from approximately 30 percent of prenatal clinic registrants in 1960 until it reached about 70 percent in 1963 and 100 percent in 1964. G2: Children born to G1s during 1960-1965 who completed the 7-and/or 8-year-old assessments of the JHCPS. At the time of the follow-up, G2s were between 27-33 years old. Assessed G3: Children born to G2s who were 7-8 years old during the follow-up period, 1992-1994.

NOTE: (1) The descriptions of some Census variables in the codebook are incomplete. (2) The documentation for each data file in this study comprises a Portable Document Format (PDF) codebook, a data map in ASCII text format, and a PDF appendix file containing SPSS display dictionary output. The PDF file format was developed by Adobe Systems Incorporated and can be accessed using PDF reader software, such as the Adobe Acrobat Reader. Information on how to obtain a copy of the Acrobat Reader is provided through the ICPSR Website on the Internet.

RESTRICTIONS: To preserve respondent privacy, certain identifying variables are restricted from general dissemination. Aggregations of this information for statistical purposes that preserve the anonymity of individual respondents can be obtained from ICPSR in accordance with existing servicing policies.

EXTENT OF COLLECTION: 3 data files + machine-readable documentation (text and PDF) + SPSS data definition statements

EXTENT OF PROCESSING: CONCHK.PR/ UNDOCCHK.PR/ MDATA.PR/ FREQ.PR/ DDEF.ICPSR/ REFORM.DATA/ REFORM.DOC/ SCAN

ICPSR Processing Note

1. The principal investigators supplied the Assessed Third-Generation Children Data to ICPSR as a SPSS export file. From this original file, ICPSR generated the LRECL data file, data map, SPSS data definition statements, and SPSS display dictionary output.
2. For reasons of confidentiality, the following variables in the Assessed Third-Generation Children Data have been blanked in the LRECL data file and set to the system missing value in the SPSS export file:

G3_DOBMM, G3_DOBDD, G3S_LOC, G2_DOBMM,
G2_DOBDD, G3G2_BMM, G3G2_BDD, G3G2R3AM,
G3G2R3AD

3. Originally supplied as WordPerfect files by the principal investigators, the frequencies in this codebook were converted to Portable Document Format (PDF) by ICPSR. Since the conversion to PDF did not retain the pagination of the WordPerfect files, the original layout of the frequency tables was not preserved in this volume.

Acknowledgments

The Pathways Study could not have proceeded without the help and commitment of many people. We wish to express our deep appreciation to them all. Among the greatest contributions were those of the mothers and their daughters and sons enrolled in both the Johns Hopkins Collaborative Perinatal Study and followed in the Pathways to Adulthood Study, and their grandchildren. They gave very generously of their time to answer our seemingly endless questions and submitted graciously to lengthy tests of physical, cognitive and behavioral function. They have our special thanks.

The Pathways to Adulthood Study was made possible by generous financial support from the William T. Grant and Robert Wood Johnson Foundations and technical support from the Johns Hopkins Population Center. We are deeply grateful.

Several of the investigators have been privileged to work with this study since its early years in Baltimore or elsewhere. Others, with different backgrounds and disciplines joined in the creation of the Pathways to Adulthood Study to assist in completing the work which extended over a period of thirty-five years.

We would like to thank our subcontractors at Survey Research Associates/Batelle for the splendid work done in tracing, contacting and interviewing Pathways subjects and in data handling and providing data tapes for our use. The work progressed smoothly and successfully.

We would like to acknowledge the assistance of a number of doctoral students from the Johns Hopkins Schools of Hygiene and Public Health and Medicine and graduate and undergraduate students from the University's Homewood campus.

We also acknowledge the assistance of personnel in the Baltimore City Departments of Health and Education and the Maryland State Departments of Health, Education and Correction for the provision of data and assistance in gaining access to study subjects and/or data.

We acknowledge, with gratitude, the interest and help accorded to the study by members of the School of Medicine's Joint Committee on Clinical Investigation, particularly by Dr. Thomas Hendrix, Chairman. Their interest and understanding of our particular problems with respect to informed consent and the archiving of data, and their flexibility in identifying solutions are deeply appreciated.

OVERVIEW

This manual has been created to assist the user of the public release version of the Pathways to Adulthood data set. All identifying information has been removed from the public release data set to assure the confidentiality of study participants.

Definitions

The Pathways to Adulthood study focused on three generations of inner-city families. All prospective and retrospective data have been organized by generation into three data files as described below. There is some duplication of essential data in each file so that each may be used alone.

First Generation Mothers (*abbreviated G1*):

The G1 file contains data on the first generation mothers who registered for prenatal care at Johns Hopkins Hospital between January 1, 1960 and December 31, 1964. Of the 2,307 eligible for follow-up, 1,552 completed interviews (77.9% response rate of known outcome and 67.3% of full interview; see page 21). All but 5% of follow-up interviews were conducted with the first generation mother. The remaining 5% were conducted with whoever raised her surviving child from age 8 to 18 including: grandmothers (1.5%); step-, foster- or adoptive parents (1.9%); biological fathers (0.8%); and, other relatives (0.7%). Fourteen percent of G1s had more than one child enrolled in the study.

Second Generation Children (*abbreviated G2*):

To qualify for the Pathways Follow-up study, second generation children (G2s) had to have been born between 1960 and 1965 and completed the 7 and/or 8 year assessments of the Johns Hopkins Collaborative Perinatal Study. Of the 2,694 G2s eligible for follow-up, 1,758 completed interviews (71.4% response rate of known outcome and 65.3% of full interview; see page 21). An additional 71 'absent' interviews were completed by relatives (absent interviews are shorter and are not included in the response rate). At the time of the follow-up (1992-1994), G2s were between 27-33 years old.

Assessed Third Generation Children (*abbreviated G3A*):

To qualify for this substudy, third generation children (G3s) had to be between 7 and 8 ½ years old at any time during the follow-up period (1992-1994). Of the approximately 2,300 G3s, 252 were eligible for the substudy and 203 completed the assessment (response rate 80.6%).

Data Components

The Pathways to Adulthood public release data sets incorporate both prospective and retrospective data collected from two separate sources. The prospective data was selected from the data collected as part of the Johns Hopkins Collaborative Perinatal Study (JHCPS); the retrospective data come from a follow-up study on a subsample of the JHCPS conducted approximately twenty-five years after the JHCPS ended. For a detailed description of the JHCPS and Pathways Follow-Up, please see the *Data Description* section.

1. Johns Hopkins Collaborative Perinatal Study (*abbreviated JHCPS*)

The Johns Hopkins Collaborative Perinatal Study, part of the National Collaborative Perinatal Project (CPP) of the NINDS, contains prospective data on first generation mothers and their second generation children until the children were 8 years old.

Data available from the JHCPS on the first generation mother (G1) in the Pathways public release data sets include:

At registration for prenatal care:	Obstetrical and Reproductive History
At or around delivery of G2:	Socioeconomic/Family History Interview
When G2 Age 4 Months:	Observations of Mother with Child
When G2 Age 8 Months:	Observations of Mother with Child
When G2 Age 7 Years:	Family History, Demographic and Socioeconomic Interviews

Data available from the JHCPS on each second generation child (G2) in the Pathways public release data sets include:

As Neonate:	Apgar scores, Nursery Course Summary - Neonate, Pediatric Abnormalities
At Age 8 Months:	Developmental Evaluation, Bayley Scales of Mental & Motor Development, Behavior Profile and other tests
At Age 12 Months:	Pediatric-Neurological Examination, Summary-Abnormalities through 1 Year; Interval Medical History
At Age 36 Months:	Language, Hearing & Speech Evaluation Summary data from the 3 year assessment
At Age 48 Months:	Psychological Test Battery (Stanford-Binet IQ), Behavior Profile, Physical Growth & Interval Medical History & other tests
At Age 7 ½ Years:	Psychological Test Battery (Wechsler Intelligence Scales, Wide Range Achievement Tests), Bender-Gestalt Motor

At Age 8 Years:	Visual Perception, Behavior Profile, Neurological/ General Pediatric Evaluation, Vision Screening, Physical Growth & other tests Language (oral and written), Hearing and Speech Evaluations, Physical Growth, Interval Medical History & other tests
-----------------	--

The CPP forms, manuals and procedures were used throughout the JHCPS.

PLEASE NOTE: We are not providing the information necessary to link the public release data sets to the CPP data set prepared by the Perinatal Research Branch of the National Institute of Neurologic and Communication Disorders and Stroke for Johns Hopkins. The primary reason is to preserve confidentiality. The potential exists for the identification of individuals through the combination of data from the two data sets. The second reason is that the data base for the JHCPS was incomplete in some areas. From the original paper records, we retrieved missing information and coded items considered relevant for the Pathways study that were not included as part of the data archived in the public use Collaborative Perinatal Project data set.

2. Pathways to Adulthood Follow-Up

After approximately 25 years with no contact, Pathways Investigators revisited families followed in the JHCPS. The retrospective data in the public release data sets come from separate interviews conducted with the G1 mothers and their G2 daughters and sons in this follow-up study.

Retrospective data on each G1 includes:

- Education
- Employment
- Family composition
- Health and health care usage
- Housing conditions
- Income and Income Sources
- Marriage, Partnerships and Changes
- Neighborhood characteristics at registration and current (1960 and 1990 Census)
- Reproductive history

Retrospective data on each G2 includes:

- Aspirations
- Education, Schooling
- Employment
- Family composition

Health (physical and mental) and health care usage
Housing conditions
Income and Sources
Legal problems, regarding antisocial behavior
Living arrangements
Marriage, Partnerships and Changes
Neighborhood characteristics at birth, 11/12, 16/17 years and current
(1960-1990 Census and Interview data)
Reproductive history
Social relationships
Smoking and Substance abuse

In addition, the G1s provided information to complement and verify the information provided by the G2s on their interviews as well as information on all their other children. The G2s provided information on all their third generation children (G3s).

The Pathways follow-up consisted of the following components:

1. G1 Questionnaire: The G1 interview consisted of a 27-page, standard format questionnaire. The primary purposes of the G1 interview were to: locate the G2; determine the G1's and G2's current status; define family relationships; learn about the G2's childhood and adolescent behavior, academic achievements and/or problems and bridge the information gap from the end of the JHCPS follow-up to the Pathways interview.
2. G2 Questionnaire: Each G2 completed a 67-page, standard format questionnaire as part of the Pathways follow-up. The questionnaire covered the entire period from the 8 year exam to the interview including: events during adolescence and early adulthood that affect later outcomes; young adulthood characteristics and outcomes; and descriptive information on the third generation children (G3s) including prenatal care, birth, health status, child care, academic performance and childhood and adolescent behavior.

Both the G1 and G2 questionnaires incorporated questions from other related surveys (see Table 1). Abbreviations of these surveys are located in the left hand margin of the G1 and G2 questionnaires included in the

codebook. Any question marked *PA* or left blank was created exclusively for the Pathways follow-up. For the most part, interview questions appear the same as in the original studies so that responses can be compared across studies. In some instances, however, the wording of the question has been changed to facilitate understanding among the Pathways participants by more closely matching their colloquial language.

* References available in Appendix C

3. Life History Calendar: In addition to the standard questionnaire, each G2 completed a life history calendar. The life history calendar facilitated recall of five, adult transition events: schooling, marital status, living arrangements (including cohabitation), fertility and employment (full- and part-time). In addition, the calendar recorded welfare utilization. The calendar enabled changes in status to be reported by quarter from age 8 to 27-33.
4. Absent G2 Interview: An Absent G2 Interview, a condensed version of the G2 interview, was conducted with the G1 or other relative if the G2 was not able to be interviewed (e.g. G2's whereabouts unknown; G2 in the military overseas, etc.). The 71 "Absent G2s" remained separate from the G2s who completed interviews.
5. Census Data: United States Census data from 1960, 1970, 1980 and 1990 supplemented the information available from the G1 and G2 interviews on the G1s' neighborhoods at registration and at the time of the follow-up and the G2s' neighborhoods at birth, age 11 to 12, age 16 to 17 and at the time of the follow-up.
6. Death Certificates: Records of non-located and known to be deceased G1s and G2s were matched with death certificate files from the Maryland State Department of Health (excepting for 1988 when records were unavailable) to supplement available data. In addition, a search of the National Death Register was conducted on the non-located G2s. Four were identified as likely dead, 12 were identified as possibly dead. This information has been reflected in the G2 Data Set.

7. Assessed G3:

The G3 assessment consisted of a battery of standard examinations of cognitive development, academic achievement and behavior, similar to the ones completed by the G2s when they were between 7 to 8 years old. In addition to these test results, data are available on the assessed G3's prenatal care, health and development, behavior, day care, academic achievement, school(s) and parental aspirations.

DATA DESCRIPTION

The Johns Hopkins Collaborative Perinatal Study

The Pathways Study had its genesis in the Johns Hopkins Collaborative Perinatal Study (JHCPS), a component of the National Collaborative Perinatal Project (CPP) of the National Institute of Neurological and Communicative Disorders and Stroke (NINCDS). Johns Hopkins was one of ten university medical centers located across the United States participating in the CPP.

The CPP was a multidisciplinary, prospective investigation in which data were collected over a 15 year period from 50,000 to 60,000 pregnant women enrolled (January 1, 1959 to December 31, 1965) at the time of their first visit for prenatal care. The women and their surviving children were followed until the children reached seven or eight years of age (depending on the participating institution, eight years in the JHCPS).

CPP Objectives

The objectives of the CPP were the identification of factors associated with perinatal, infant and later child mortality and the continuum of reproductive wastage represented by preterm delivery, low birthweight, congenital malformation and the spectrum of neurological and cognitive disorders thought to be related to perinatal adversity. These include: overt neurological problems, such as cerebral palsy and congenital malformations; neurosensory defects associated with vision and hearing; cognitive defects spanning the range from mental retardation to specific disorders of learning, attention or activity. The CPP was a study designed to examine associations between antecedent characteristics and events and later outcomes. It, like the Pathways study, was not an epidemiological investigation to establish population prevalences of various conditions. In fact, the focus on non-representative, high risk obstetrical populations precluded such studies of prevalence.

CPP Sample Selection

The study population enrolled at each participating institution included either all available prenatal patients living within a defined geographic area or women randomly selected from those available in each prenatal clinic. As a result, all women had at least one prenatal visit. In most institutions, only public ward patients were included.

CPP Methodology, Data Collection and Handling

The methodology for the Collaborative Perinatal Project was developed by a number of small committees of experts in the relevant areas, coordinated by senior staff members in the Perinatal Research Branch of the NINCDS. For example, obstetricians from the various participating institutions aided by outside consultants, including neonatologists, planned the methodology for the observations made during pregnancy, labor and delivery and the post-partum period. Similarly, pediatricians and pediatric neurologists planned the data collection during the neonatal period, when the children were four and twelve months and between seven and eight years (targeted for seven and a half in the JHCPS). Child psychologists, assisted by consultants, planned the developmental assessments of the children made at 8 months, 48 months and seven years. Audiologists, speech pathologists and language experts designed the special assessments used at 36 months and 8 years. Members of these working groups participated in the design of data collection instruments, data forms and accompanying manuals. Inter-institutional reliability was monitored over time by means of regularly scheduled exercises, coordinated by PRB staff, involving visitation between institutions for tests of inter-observer reliability.

The methodology and instruments used for data collection and handling in the JHCPS were those of CPP. Data for each of the scheduled examinations and interviews were collected on detailed, structured, pre-coded forms according to specific instructions provided in the accompanying manual. Each form (excepting for the 8 year Speech, Language and Hearing) provided for a structured summary, coded normal, suspect and abnormal. The personnel making the observations were professionals with special training in the relevant, testing area. Staff at all levels were carefully trained and monitored.

All data collection forms were checked for completeness and consistency within a few days of data collection, by an unbiased colleague and by a records editor. They provided feedback to the person who collected the data, in order to resolve incompleteness, inconsistency or other identified problems. This oversight encouraged adherence to protocol. Completed forms were then sent to the PRB for a second review (with institutional feedback), coding and computer storage.

Maintaining the study sample was a major issue for each institution. Sample maintenance staff were employed to assure adherence to the schedule of appointments for the various follow-up examinations and interviews. Many techniques, varying by institution, were used to trace, motivate and achieve compliance by participants. In the JHCPS, successful follow-up varied between 90% during the first years to 85% at age 4 and 88% at ages 7 and 8. Overall, 76% of all surviving children had all follow-up examinations.

JHCPS Study Sample

The JHCPS sample consisted of pregnant women seeking prenatal care and delivery at the Johns Hopkins Hospital. They were selected on the basis of the last digit of their hospital history number. This number was assigned from a central hospital file at point of first patient contact, often many years earlier. The proportion of prenatal clinic registrants enrolled was increased by adding to the number of terminal digits selected from approximately 30% in 1960 until it reached about 70% in 1963 and 100% in 1964, the last year of enrollment. There were virtually no refusals of participation. Table 1 provides the follow-up performance of the second generation children by year of birth and Table 2 gives the final status of the JHCPS sample.

Of the approximately 4,000 mothers enrolled in the JHCPS, 77% were black, 22% were white and less than 1% were from other racial groups. They were generally poor. Their educational level was very low. Seventy percent of the black women and 85% of the white women were married at the birth of their study child. At registration, nearly all the women lived in inner-city Baltimore, predominantly in East Baltimore, among Baltimore's poorest neighborhoods.

In the early 1960's, Baltimore's poor neighborhoods were relatively stable and the crime rate was relatively low. Most of the families were large by today's standards and extended families were commonplace. White families tended to live in enclaves within the predominantly black census tracts but their children attended the same public or parochial schools. Housing, for the most part, consisted of small, old row houses. There were a limited number of garden-type, low-rise housing projects built during World War II and some post-war high rise projects. With few exceptions, there was little open space or play areas for children except the street. Low-level jobs in defense plants, shipyards and other heavy industrial plants provided the main source of employment for the males. Women, for the most part, were employed in domestic, housekeeping and clerical positions. Most of the study families received their medical care in the clinics of the Johns Hopkins Hospital and the child health clinics of the Baltimore City Health Department.

CPP Results

A number of books and many journal articles have originated from the large multidisciplinary data base in the CPP. Several of these volumes describing segments of the data relative to the JHCPS are listed in the bibliography.

The Pathways to Adulthood Follow-Up Study

The JHCPS population and data base including copies of the CPP archived computer tapes, the voluminous paper records and tracing files for each subject, provided the foundation for the development of the Pathways to Adulthood follow-up study. The study includes members from three generations in families initially living in inner-city Baltimore, Maryland, most in close proximity to the Johns Hopkins Hospital. The Johns Hopkins Hospital is both a university teaching hospital and a community hospital with admission policies that favor the provision of care to high risk patients, particularly those from the community.

Pathways Objectives

The specific aims of the Pathways Study were to:

1. Identify pathways to adulthood, characterized by a spectrum of outcomes from the attainment of competence and self-sufficiency in several domains of every day living, to vulnerability and failure to be self-sufficient in one or more areas;
2. Investigate biological/health and family/environmental factors and their inter-relationships, present during four time periods that predict adult outcome: Infancy (birth and infancy to one year); Preschool (1-5 years); Early school age (5-8 years); and, Preteen and Adolescence (9-17 years). Emphasis was placed on the identification of protective factors that predict a favorable outcome in this population of poor, socially disadvantaged children, which is vulnerable to failure due to family economic dependency, incapacitating illness or accidents, substance abuse, criminal behavior, or adolescent childbearing;
3. Determine the influence of G2s' adult status on the development of their G3 children;
4. Examine in detail the development (physical, cognitive and behavioral) of children in two successive generations (the G2s and G3s) at age 7 to 8 ;
5. Examine patterns of fertility in two successive generations.

Pathways Design

An intergenerational life-course model, extending from the first generation mother's (G1) pregnancy to the second generation child's (G2) follow-up interview at age 27-33, was employed to identify biological/health and family/environmental factors that influenced the developmental trajectory of the G2.

Pathways Sample Selection

Selection of the subsample for follow-up in the Pathways to Adulthood study required that: the first generation mother (G1) entered prenatal care after January 1, 1960; and the second generation child (G2) had received the seven and/or eight year assessments. Of the 4,025 children followed in the JHCPS, 427 (11.1%) were born in 1959; 404 (10.5%) did not receive either the seven or eight year assessments (see Table 2). In addition, 60 mother/child dyads, randomly selected for the pilot study were also dropped.

In order to avoid biases inherent in the original JHCPS enrollment which extended from January 1960 through December 1964 and the effect on G2 age at interview, the 2,940 G2s and their families were randomly assigned to one of five replicates (A-E). Interviewing began with replicate A. Once in the field, it became apparent that the sample size would have to be reduced due to budgetary constraints. As a result, replicate E was dropped. Thus, the final sample for the Pathways follow-up study included 2,694 G2 children and their 2,306 G1 mothers. Interviewing proceeded through replicate D with approximately equal percentages of success in each replicate.

Table 3

Final Eligible Sample	2694	

* Eliminated due to special circumstances

Pathways Data Methodology, Data Collection and Handling

During the first four months of the follow-up study, investigators developed and pretested the interview instruments. Training manuals for interviewers were also designed, along with question-by-question specifications. The initial fielded version of the interviews was significantly shortened after 4 weeks in the field in order to keep within the budgeted interviewing lengths for the G-1 and G-2 instruments. The abstraction of tracing information on the respondents from the original CPS records was also begun; all abstracting was completed within the first four months of the field effort.

A variety of sources and methods were used to trace the respondents. These included: next-of-kin information abstracted from the JHCPS study records; Johns Hopkins Hospital patient ID files; telephone and criss-cross directories; electronic searches of the TransUnion credit records, Maryland Division of Motor Vehicle records, Maryland criminal justice records; voter registration files and field contacts. Table 4 lists the sources in the order they were utilized and the success of each method for locating G1s and G2s.

Table 4

Tracing Source Leading to Locate or Deceased Status	G1 (n=1993)	G2 (n=2152)
CPS Records, Next-of-Kin	49.8%	48.0%
JHU Hospital Records	25.0	25.9
TransUnion Credit Records	8.2	7.2
Telephone Directory/Assistance	6.1	6.5
Department of Motor Vehicles	5.6	5.9
Criss-Cross Directory	2.6	2.6
Criminal Justice Information System	2.0	3.3
Field Contact	0.7	0.6

Three, one-week interviewer training sessions were conducted during the course of the follow-up: August 1992, January 1993 and July 1993. In total, 27 interviewers were trained; on average, 15 worked on the study at any given time. There was surprisingly little turnover. In order to assure confidentiality and objectivity, respondents were assigned to interviewers so that an interviewer did not contact members of the same family. Interviews were only conducted with the respondent's informed consent and without knowledge of prior data.

Overall, 70% of interviews were conducted face-to-face and 30% were conducted over the telephone. Telephone interviews were successfully used to interview respondents: who lived out of the area--California, Alaska, etc., or in a particularly dangerous area; when the respondent would only do an interview over the phone or when a telephone interview was the only way of completing an interview, e.g. respondent had several no-

shows, was difficult to contact etc..

G-1 Interviews were conducted with the birth mother in 95 percent of all cases. The remaining five percent were conducted with whomever took care of the G2 from age 8 to 18 including grandmothers (1.5%), step-, foster-, or adoptive parents (1.9%), fathers (0.8%) and other relatives (0.7%). On average, G1s completed the interview in 36 minutes. An average of 5.4 contacts was made in order to complete an interview with the G1. The G2 interview took, on average, 100 minutes to complete (1.6 hours). Due to the length of the interview, respondents were given a \$25 incentive upon completion. On average, 7 contacts (range 2-12) were made with the G2 before the interview was completed.

Once collected, the data went through three editing processes. The first edit was performed by interviewers after they completed an interview. The second edit was done by editors, who reviewed each interview for completeness, accuracy and appropriate skips. Considerable effort was given to reviewing the life history calendar for accuracy and consistency with answers recorded in the interview. When necessary, the respondents were re-contacted to supply missing information. Editing staff also validated data; approximately one in ten interviews was validated through a telephone call to the respondent, where their answers to predesignated questions were verified. Interviewers were given feedback on all their mistakes to reduce repeat errors. The data were double keyed and then cleaned using a computerized program to check for ranges, invalid skips and logics. A final, informal edit was conducted on the computerized data by programmers affiliated with the study. Any discrepancies uncovered during their analyses were verified against the hard copy interviews.

Pathways Study Population

Table 5 gives the final status of the G1s and G2s. The response rate of known outcomes has been shown as a multiplicative factor which takes into account both the tracing rate and the interview completion rate and has been calculated as follows:

$$(\# \text{ Located} / \text{Eligible Sample}) \times (\# \text{ Completed} / \text{Fieldable Sample}) \times 100$$

where number completed includes G1/G2 with completed interview, deceased G1/G2 with data from other sources and G2 with completed absent G2 interview. The response rate of full interviews is simply the number with completed interviews divided by the eligible sample.

Table 5

	G1	G2
	n	n
Final Status of Field Effort		
Eligible Sample	2306	2694
Not Located	292	474
Located	2014	2220
Not Fieldable		
Out of Country/Incapable	17	11
Deceased, No Data	69	17
Fieldable Sample	1928	2192
In Field end of follow-up	58	157
Refused	151	135
Absent G2 Interview	na	71
Deceased with Data	167	71
Full Interview	1552	1758
Response Rate (Known Outcome)	77.9	71.4
Response Rate (Full Interview)	67.3	65.3

The most difficult segment of the sample to locate were young male G2s. Even when the G1 mother was contacted, it was common that they did not know the address or telephone number for their G2 son. Of the fieldable cases, 75.5% of men completed interviews compared to 87.2% of women. In addition, three times more absent G2 interviews, an abbreviated form of the G2 interview completed by the G1 or other relative, were completed for male G2s than female G2s.

Refusals occurred more frequently in pairs. Nearly one quarter of G2 refusals were accompanied by a G1 refusal. In contrast, only 4.3 percent of G2s who agreed to be interviewed were linked to a G1 refusal.

Of the interviewed G2s, 64% still live in Baltimore City, primarily in East and West Baltimore, two of the poorest neighborhoods in the city. Today, East Baltimore has a much smaller population than it had in 1960. By the late 1960s, with the breakdown of segregation, the more affluent black families were beginning to move out to areas with more amenities and better schools. This out-migration increased during the 1970s. This out-migration is clearly visible among the interviewed G2s as 26% have moved to other counties within the state of Maryland, 17% to the surrounding suburbs of Baltimore City. Ten percent have moved out of state.

For those who still live in the inner-city, life can be bleak. Baltimore's inner-city neighborhoods, like those of other old industrialized cities have become more homogeneous in their poverty and social disadvantage. (McGeary and Lynn, 1988; Rusk, 1996) The heavy industrial and manufacturing jobs that provided stable employment for males have largely disappeared as have the corner groceries and small neighborhood shops. The housing stock has deteriorated. Many houses are boarded up, the streets are dirty and poorly maintained. Families have disintegrated. There has been a marked increase in female-headed, single-parent households. Early sexual onset, teenage pregnancy, sexually transmitted disease, crime and alcohol and drug abuse are commonplace.

Pathways to Adulthood Results

Several papers have been published or are pending publication based on the Pathways to Adulthood study. They have been included in the bibliography.

ASSESSED G3 DATA SET

Sample

All third generation (G3) children who were 7 to 8 ½ years old at any time during the Pathways follow-up (October 1992 - March 1994) were invited to participate in a 3-4 hour pencil and paper test. The test consisted of standardized examinations of cognitive ability, academic achievement and behavior, using contemporary test instruments similar to the ones completed by the second generation children when they were 7 to 8 years old. All tests were administered by a child psychologist at Johns Hopkins. Half way through the examination, each child had a 15 to 30 minute break and a snack. Testing took place on Saturdays, school holidays or afternoons, so the child would not miss school. The G2/parent who brought the child in for testing received a \$20 incentive and \$5 to cover transportation costs or free taxi service. Baby sitting for siblings was provided at the testing site.

Table 1 provides the final status of the 252 G3s who qualified for this substudy and were available for follow-up. The G3A Data Set contains all the data collected on the 203 third generation children who completed the substudy, the “Assessed G3s”. The response rate has been calculated by dividing the G3s who completed the assessment by the fieldable sample.

Table 1

Final Status	Number	Percent
Fieldable Sample	252	100.0
Completed Assessment	203	80.6
Refused		11.1
G2 Refused G2 Interview	26	
Participation of G3 Refused	2	
Repeated No Show	21	8.3
<i>Response Rate (Completed Assessment)</i>		<i>80.6</i>

Data Set

All variables have been assigned an eight digit name that reflects the subject, source and item number of the data. In general, variable names were constructed as follows:

____ Subject ____ Source\Specific Item

In the G3A Data Set, all variables begin with the prefix G3 or G2 reflecting the subject of the data. The next 1 to 4 digits indicate the source of data. Table 2 contains these abbreviations. The remaining 2 to 5 digits represent the specific items from the data instruments. Whenever possible, the subject prefix and source abbreviation have been separated from the specific question by an underbar (_). In addition, each variable contains a detailed variable label as well as value labels for all valid values. Missing values have been noted.

Table 2

Data Source	Abbreviation
Wechsler Intelligence Scale for Children Third Edition	W
Woodcock-Johnson Tests of Achievement	WJ
Peabody Picture Vocabulary Test-Revised	PPVT
Behavior Profile	PS36
Achenbach Child Behavior Checklist	
Individual Items	CB
Scores	SCB
Parent Interview	PI
School Characteristics	S
G2 Interview - Sections Q & R	G2Q or G2R

Throughout the data set, dates have been given in two formats: by month, day and year and by century quarters. Century quarters reflect the number of quarters since the turn of the century, with January 1900 equal to 1.

They have been calculated as follows:

Century quarter = Last 2 Digits of Year * 4	+ 1 (January, February, March)
	+ 2 (April, May June)
	+ 3 (July, August, September)
	+ 4 (October, November, December)

Within the G3A Data Set, each record reflects a unique G3. The first 27 variables uniquely identify each of the G3s and their parent(s). A brief description of these variables follows:

g3_id	Unique identifying number for the G3.
g2_id	Unique identifying number for the “primary” G2 (i.e. the more involved parent). In 4 cases, both of the assessed G3’s parents had been followed in the JHCPS and Pathways follow-up. Designating a G2 as “primary” or “secondary” was based on the amount and quality of the data they provided. If there was no difference, this designation was random.
g2_id2	Unique identifying number for the “secondary” G2.
famid	The family ID consists of the first 5 digits of the each ID number and links the G1, G2 and G3 family.
g2order	This variable gives the last two digits of the G2 ID which reflect the order of the children enrolled in the study (14% of G1s had more than one child enrolled in the study). This is not necessarily the child’s birth order within the family. Values range from 10 (first study child) to 40 (fourth study child); 11/12 and 21/22 reflect first and second order twins.
g3order	This variable gives the last two digits of the G3 ID which reflect the order of the children enrolled in the substudy (9% of G2s had more than one child who participated in the substudy). This is not necessarily the child’s birth order within the family. Values range from 10 (first substudy child) to 30 (third substudy child).
g3order1	We created this flag to facilitate linking the G3A Data Set to the G2 Data Set. This variable which appears in the G3A and G2 data sets indicates the G3’s birth order among all the primary G2’s children.
g3match1	This dummy variable indicates whether the birthdate given by the “primary” G2/parent when they brought the G3 in for testing matched the birthdate given by the G2 as part of their interview (section Q) for the same child.
g3order2	This variable which appears in the G3A and G2 data sets indicates the G3’s birth order among all the secondary G2’s children.

g3match2	This dummy variable indicates whether the birthdate given by the “secondary” G2/parent when they brought the G3 in for testing matched the birthdate given by the G2 as part of their interview (section Q) for the same child.
G3_doimm	Month of G3's testing
G3_doidd	Date of G3's testing
G3_doiyy	Year of G3's testing
G3_doicq	Century Quarter of G3's testing date.
G3_dobmm	Month of G3's birthday
G3_dobdd	Date of G3's birthday
G3_dobyy	Year of G3's birthday
G3_dobcq	Century quarter of G3's birthday
G3_race	G3's race
G3_sex	G3's gender
G3_ägeyy	G3's age in years at the time of their testing
G3_agemm	G3's age in months at the time of their testing
G3_grdyy	G3's grade in school in years at the time of their testing
G3_grdmm	G3's grade in school in months at the time of their testing
G3_thin	G3's height at the time of testing, rounded to the nearest inch
G3_wtlbs	G3's weight at the time of testing, rounded to the nearest pound
G3_hdcm	G3's head circumference (maximum suboccipital-bregmatic) at the time of testing, rounded to the nearest centimeter

The remaining variables within the G3A Data Set have been organized by data source.

DATA SOURCES

Wechsler Intelligence Scale for Children - Third Edition

Variables: G3w_viqs, G3w_viqp, G3w_piqs, G3w_piqp, G3wfsiqs, G3wfsiqp

Description: Test results include a verbal, performance and full scale IQ score and percentile rank.

Reference: Wechsler Intelligence Scale for Children--Third Edition. 1991. The Psychological Corporation. Harcourt Brace Jovanovich, Inc. San Antonio, TX 78204

Woodcock Johnson Tests of Achievement

Variables: G3wjbryy, G3wjbrmm, G3wj_brs, G3wj_brp, G3wjlwyy, G3wjlwmm, G3wj_lws, G3wj_lwp, G3wjrpcy, G3wjpcm, G3wjrpacs, G3wjpcm, G3wjrpacs, G3wjrpcp, G3wjbmyy, G3wjbmmm, G3wj_bms, G3wj bmp, G3wjcayy, G3wjcamm, G3wj_cas, G3wj_cap, G3wjapyy, G3wjapmm, G3wj_aps G3wj_app

Description: Test areas include: broad reading, letter word identification, passage comprehension, broad math, calculation and applied problems. Scores are presented as a grade equivalent, standard score and percentile rank.

Reference: Woodcock-Johnson Psycho-Educational Battery. 1977. DLM Teaching Resources. One DLM Park, Allen, TX 75002

Peabody Picture Vocabulary Test-Revised

Variables: G3ppvtyy, G3ppvtmm, G3ppvts, G3ppvtp

Description: The PPVT provides an estimate of the G3's verbal ability. Results are presented in terms of mental age (year and month) as well as a standardized score and percentile rank.

Reference: Peabody Picture Vocabulary Test--Revised 1981.
Lloyd M. Dunn & Leota M. Dunn. Form L.
Published by American Guidance Service, Circle Pines,
MN 55014

Behavior Profile

Variables: G3ps369 to G3ps3627

Description: At the end of the G3's testing, a child psychologist evaluated the child's behavior using the Behavior Profile protocol, the same protocol developed for use in the Collaborative Perinatal Project. It contained 15 items measuring: separation from the G2/parent; fearfulness; rapport with examiner; self-confidence; emotional reactivity; degree of cooperation; level of frustration; degree of dependency; duration of attention span; goal orientation; level of activity; nature of activity; nature of communication; assertiveness and hostility. The individual items were scored 1 through 5, with 3 representing normal behavior.

Reference: Protocol available in Appendix A

Achenbach's Child Behavior Checklist

Variables: *Individual Items:* G3cb_1 to G3cb_113

Scores: G3scb_w1, G3scbsc1, G3scbad1, G3scbsp1, G3scb_t1, g3scbap1, G3scbdb1, G3scbab1, G3scb_s1, G3scb_w2, G3scbsc2, G3scbad2, G3scbap2, G3scbdb2, G3scbab2, G3scb_s2, G3scbtno, G3scbtsc, G3scbtts, G3scbtri, G3scbtit, G3scbtre, G3scbtta, G3scb_w3, g3scbsc3, G3scbad3, G3scbsp3, G3scbtp3, G3scbap3, G3scbdb3, G3scbab3, G3scb_w4, G3scbsc4, G3scbsp4, G3scbda4, G3scbic5, G3scbic6, G3scbic7

Description: In the third part of their interview (see below for description of other parts), the G2/parent completed the parent's portion of the Achenbach Child Behavior Checklist Ages 4-16. Questions I through VII (the first two pages of the standard instrument) were excluded from this study as these questions were either covered in other parts of the parent's interview or did not seem relevant to this mainly inner-city population. Because the entire CBCL was not included in the study, "total" scores could not be calculated.

Reference: Child Behavior Checklist for Ages 4-16. 9-80 Edition.
T. Achenbach, University of Vermont
1 South Prospect Street, Burlington, VT 05405

G2/Parent Interview

Variables: G3pi_rel; G3pi_q8 to G3pi_q19

Description: While the G3 was being tested, a person familiar with the G3's daily routine completed a three part interview. In most cases, this person was either the G2 or the G3's other parent; see G3pi_rel for their actual relationship to the G3. In the first part, a standard format questionnaire, the G2/parent provided information on the G3's recent living arrangements, school attendance, school progress as well as their aspirations for the G3 in terms of

schooling and vocation.

Reference: Protocol available in Appendix A

School Characteristics

Variables: G3s_loc, G3snopk5, G3s_no1k, G3sper1k, G3snoent, G3s_pent g3snwith, G3s_pwit, G3snorss, G3s_prss, G3snsel1 G3snsel2, G3snsel3, G3snsel4, G3snsel5, G3snolen, G3s_plen, G3s_nch1, G3s_pch1, G3s_nfl, G3s_pfl, G3sprom4, G3sprom3, G3spsan4, G3spsan3, g3s_pab5, G3spab20

Baltimore City Students Only: G3revo91, G3reco91, G3reto91, G3maco91, G3mad91, G3mato91, G3lame91, G3laex91, G3lato91, G3revo92, G3reco92, G3reto92, G3maco92, G3mad92, G3mato92, G3lame92, G3laex92, G3lato92, G3revo93, G3reco93, G3reto93, G3maco93, G3mad93, G3mato93, G3lame93, G3laex93, G3lato93, G3revo94, G3reco94, G3reto94, G3maco94, G3mad94, G3mato94, G3lame94, G3laex94, G3lato94

Description: In the second part of the G2/parent's interview, they supplied the name and address of the G3's school(s) for the current and past academic years and the name of the G3's teachers. This information was used to collect data on the G3's school characteristics. For public schools, selected characteristics were pulled from the Maryland School Performance Program Reports (1993). For private and parochial schools, comparable information was collected directly from the schools. In addition, for those G3s who attended Baltimore City schools, standardized scores in reading, language and mathematics have been included from their academic record.

G2 Interview - Sections Q and R

Variables: G2_final (final study status), G2_race, G2_sex, G2_dobmm, G2_dobdd, G2_dobyy, G2_dobyy, G2_dobcq, G2totg3s, G2_f_q, G2_q1, G2_q2, G2_m_q, g2_q8, g2_q9, G3g2_bmm, G3g2_bdd, G3g2_byy, G3g2_bcq, G3g2gndr, G3g2wtlb, G3g2wtoz, G3g2nrml, G3g2prbm, G3g2prec, G3g2hosp, G3g2htdp, G3g2comm, G3g2_hmo, G3g2_phy, G3g2_oth, G2_r1, G3g2_r2 to G3g2r298, G2_r30 to G2_r35b5

Description: As part of the Pathways follow-up, each G2 completed a 74 page, standard format questionnaire. In sections Q and R of the questionnaire, the G2 provided information on all their children covering topics such as: health and development, living arrangements, child care, pre-school experience and behavior problems. This information has been included in the G3A Data Set for the child who participated in the substudy. Included in these sections of the questionnaire were also several questions pertaining to the G2 e.g. final interview status; gender; total number of children. Because the subject of these questions is the parent, in the G3A Data Set these variables begin with "G2". Extensive prospective and retrospective data describing the G2's infancy, early childhood, late childhood, adolescence and young adulthood are available in the G2 Data Set.

Frequencies for all the variables in the G3A Data Set follow.

APPENDIX A

Behavioral Profile (PS36) Protocol

Parent Interview

7-YEAR PSYCHOLOGICAL EXAMINATION
BEHAVIOR PROFILE

2. NAME OF CHILD

3. DATE OF BIRTH	4. AGE	5. SEX	6. RACE
MO. DAY YEAR		<input type="checkbox"/> MALE <input type="checkbox"/> FEMALE 1 2	<input type="checkbox"/> W <input type="checkbox"/> H <input type="checkbox"/> OR 1 2 3 <input type="checkbox"/> PR <input type="checkbox"/> OTHER 4 5

7. EXAMINED BY

7. EXAMINED BY	8. DATE OF EXAM
	MO. DAY YEAR

9. SEPARATION FROM THE MOTHER

1 <input type="checkbox"/>	2 <input type="checkbox"/>	3 <input type="checkbox"/>	4 <input type="checkbox"/>	5 <input type="checkbox"/>
Shows no concern; eager to leave mother and go with examiner	Shows very little concern	May show some initial reticence, which is felt to be entirely appropriate	More than usual amount of concern	Very upset, cries, clings to mother

15. COMMENTS

10. FEARFULNESS

1 <input type="checkbox"/>	2 <input type="checkbox"/>	3 <input type="checkbox"/>	4 <input type="checkbox"/>	5 <input type="checkbox"/>
No apparent awareness of strange situation	Very little fear evidenced	Normal amount of caution in the situation	Inhibited and uneasy throughout with some slowing of responses	Very fearful and apprehensive

11. RAPPORT WITH EXAMINER

1 <input type="checkbox"/>	2 <input type="checkbox"/>	3 <input type="checkbox"/>	4 <input type="checkbox"/>	5 <input type="checkbox"/>
Exceptionally shy; withdrawn	Shy; waits for friendly gestures	Perhaps some initial shyness; feels at ease	Very friendly and at ease	Extreme friendliness

12. SELF-CONFIDENCE

1 <input type="checkbox"/>	2 <input type="checkbox"/>	3 <input type="checkbox"/>	4 <input type="checkbox"/>	5 <input type="checkbox"/>
Lacks self-confidence; extremely self-critical	Distrusts own ability	Adequately self-confident	More than usual amount of self-confidence	Very self-confident

13. EMOTIONAL REACTIVITY

1 <input type="checkbox"/>	2 <input type="checkbox"/>	3 <input type="checkbox"/>	4 <input type="checkbox"/>	5 <input type="checkbox"/>
Extremely flat; no change in facial expression	Somewhat flat; little change in emotional tone	Normal responsiveness; effect appropriate to situation	Mood more variable than average	Extreme instability of emotional responses; marked emotional lability

14. DEGREE OF COOPERATION

1 <input type="checkbox"/>	2 <input type="checkbox"/>	3 <input type="checkbox"/>	4 <input type="checkbox"/>	5 <input type="checkbox"/>
Extreme negativism	Resistive to demands or directions a good deal of the time	Cooperative with reasonable amount of discomfort and anxiety	Accepts direction or demands more easily	Extremely suggestible and conforming

7-YEAR PSYCHOLOGICAL EXAMINATION
BEHAVIOR PROFILE

17. LEVEL OF FRUSTRATION TOLERANCE				
<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 4	<input type="checkbox"/> 5
Withdraws completely	Occasionally withdraws from task where difficulty is encountered	Attempts to cope with difficult situations	Becomes quite upset by difficulty	Extreme acting out behavior and/or crying
18. DEGREE OF DEPENDENCY				
<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 4	<input type="checkbox"/> 5
Very self-reliant; refuses help	Rarely needs reassurance	Dependent in appropriate situations	Demands more attention than average	Constant need for attention or help
19. DURATION OF ATTENTION SPAN				
<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 4	<input type="checkbox"/> 5
Attends to tasks very briefly	Spends short time with tasks	Spends adequate amount of time on tasks	Spends more than average time on tasks	Highly perseverative
20. GOAL ORIENTATION				
<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 4	<input type="checkbox"/> 5
No effort to reach a goal	Briefly attempts to achieve goal	Able to keep goal or direction in mind	Keeps goal and questions in mind	Compulsive absorption with task
21. LEVEL OF ACTIVITY				
<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 4	<input type="checkbox"/> 5
Extreme inactivity and passivity; placid, sluggish	Little activity; content to sit still most of the time	Normal amount of activity	Unusual amount of activity and restlessness	Extreme overactivity and restlessness; can't sit still
22. NATURE OF ACTIVITY				
<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 4	<input type="checkbox"/> 5
Extreme rigidity; unable to shift activity or approach to task	Some rigidity	Flexible behavioral patterns; activity appropriate to different situations	Behavior frequently impulsive	Extremely impulsive; explosive and uncontrolled behavior

23. COMMENTS

7-YEAR PSYCHOLOGICAL EXAMINATION
BEHAVIOR PROFILE

25. NATURE OF COMMUNICATION					26. COMMENTS
<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 4	<input type="checkbox"/> 5	
Little or no verbal communication	Verbal or non-verbal responses confined to answering directed questions	Readily answers questions; may elaborate responses	Answers questions freely	Difficult to follow child's thinking	
26. ASSERTIVENESS					
<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 4	<input type="checkbox"/> 5	
Extremely assertive, willful personality	Quite forceful, unnecessarily rough and careless in handling materials	Self-assertive but accepting of the situation and capable of control	Passive acceptance; permits self to be somewhat controlled by examiner and situation	Extreme passivity; malleability and acquiescence to everything	
27. HOSTILITY					
<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 4	<input type="checkbox"/> 5	
Very hostile, obstructive	Unusual amount of hostility present	No unusual amount of hostility evidenced	Very agreeable child who rarely shows hostility even where it might be appropriate	Ingratiating child

PATHWAYS TO ADULTHOOD

**INTERVIEW WITH PARENT/GUARDIAN OF
7/8 YEAR OLD (G3)**

The Johns Hopkins Medical Institutions

Baltimore, MD

September 1992

COMPLETE Q.1 AND Q.2 BEFORE STARTING

INTERVAL HISTORY

8. During the past 3 months, since (DATE), has (CHILD) had a serious injury or illness that lasted a week or more?

NO (SKIP TO Q.9) 1
YES 2
DK (SKIP TO Q.9) 8

a. What happened then? IF MORE THAN ONE, ASK ABOUT THE MOST RECENT OCCURRENCE. DESCRIBE:

ILLNESS 1
INJURY 2

9. During the past 3 months, since (DATE), have there been any major changes in the household in which (CHILD) lives that might have upset (him/her)?

NO (SKIP TO Q.10) 1
YES 2
DK (SKIP TO Q.10) 8

a. What happened then? IF MORE THAN ONE, ASK ABOUT THE MOST RECENT OCCURRENCE. DESCRIBE:

DEATH 1
ILLNESS 2
LOSS OF JOB 3
OTHER 4

10. During the past 3 months, since (DATE), have there been any major changes in (his/her) schooling?

NO (SKIP TO Q. 11)	1
YES	2
DK (SKIP TO Q.11)	8

a. What happened there? IF MORE THAN ONE, ASK ABOUT THE MOST RECENT OCCURRENCE. DESCRIBE:

DIFFERENT SCHOOL	1
DIFFERENT TEACHER	2
DIFFERENT GRADE	3
OTHER	4

11. Since (CHILD) started kindergarten, how many different schools has (s/he) been in?

NUMBER OF SCHOOLS	—	—
DK	98	

12. Has (s/he) skipped any grades in school?

NO (SKIP TO Q.13)	1
YES	2
DK (SKIP TO Q.13)	8

a. What grades did (s/he) skip?
RECORD UP TO 3 GRADES

GRADE	—	—
GRADE	—	—
GRADE	—	—

13. Has (s/he) repeated any grades?

NO (SKIP TO Q.14)	1
YES	2
DK (SKIP TO Q.14)	8

a. What grades did (s/he) skip?
RECORD UP TO 3 GRADES

GRADE	—	—
GRADE	—	—
GRADE	—	—

b. What was the one main reason (CHILD) repeated grades? Was it because of...
READ CATEGORIES
IF OTHER, DESCRIBE:

Academic failure	1
Immaturity, acted too young	2
Medical problems	3
Truancy	4
Changed schools	5
Some other reason (Describe)	6
DK	8

14. In the last 12 months, since (DATE), how many days was (CHILD) absent from school because of an illness or injury?

ILLNESS ABSENCE	—	—
DK	998	

15. In the last 12 months, since (DATE), how many days altogether was (CHILD) absent from school?

TOTAL ABSENCES	— — —
NONE (SKIP TO Q. 16)	000
DK	998

- A. What was the one main reason for (his/her) absences in the last 12 months?
DESCRIBE BELOW. DO NOT READ LIST.

ILLNESS	01
OTHER PHYSICAL PROBLEM	02
EMOTIONAL OR MENTAL CONDITION	03
ILLNESS IN FAMILY	04
FAMILY MOVED	05
STUDENT SHIFTED FROM SCHOOL TO SCHOOL	06
PARENTAL OBJECTION	07
SCHOOL BEHAVIOR PROBLEM	08
TRUANCY	09
INADEQUATE CLOTHING OR FOOD	10
OTHER	11
DK	98

16. How do you feel about (CHILD)'s progress in school? Do you feel (s/he) is . . . (READ CATEGORIES)

Doing really well	1
Doing about as well as (s/he) can . . .	2
Could be doing better	3
DK	8

17. How far would you like (CHILD) to go in school? Would you like (him/her) to . . . (READ CATEGORIES)

Leave school before graduation from highschool	1
Graduate from highschool	2
Get some college or other training . . .	3
Graduate from college	4
Take further training after college . . .	5
DK	8

18. How far do you think (s/he) will go in school? Do you think (s/he) will . . . (READ CATEGORIES)

Leave school before graduation from highschool	1
Graduate from highschool	2
Get some college or other training . . .	3
Graduate from college	4
Take further training after college . . .	5
DK	8

19. What kind of job would you like (CHILD) to have when (s/he) finishes school? For example, teacher, plumber, business owner, policeman, doctor. (PROBE FOR SPECIFIC JOB TITLE AND DESCRIBE BELOW. DO NOT CODE.)

EXECUTIVE, ADMINISTRATIVE,	
MANAGERIAL	01
PROFESSIONAL SPECIALTIES	02
TECHNICAL, SALES, ADMINISTRATIVE SUPPORT	03
SERVICE OCCUPATIONS (INCL PRIVATE) .	04
FARMING, FISHING, FORESTRY	05
PRECISION PRODUCTION, CRAFT, REPAIR	06
OPERATORS, FABRICATORS, LABORERS .	07

20. RECORD TIME

TIME

Now, I would like to ask you some questions about (CHILD)'s behavior as you observe it.

GO TO ACHENBACH

PATHWAYS TO ADULTHOOD

405 North Caroline Street • Baltimore, Maryland 21205 • 1410: 955-2976

PERMISSION TO CONTACT SCHOOL (7 - 8 ½ Year Olds)

As it is important for us to know how the child's progress and behavior in school compare with others in his/her class, we would like to contact your child's teacher. Please will you tell us:

Name and address of the school currently attended and the specific grade that your child is in.

Name of School _____

Address of School _____

Specific Grade _____ (Probe, eg. For 2(b))

Name of Principal _____

Name of Teacher _____

INTERVIEWER

If the interview is conducted during the summer or prior to October 15th of current school year, please also obtain data for last school year.

Name of School _____

Grade _____

Principal _____

Child's Teacher _____
