Research Interests

Environmental and genetic risk factors for breast cancer and other chronic diseases, women's health, early life factors related to health in adulthood, chronic renal failure, health effects of pesticides and other agricultural exposures, health effects of oil spills.

Current Studies with NIEHS Intramural funding

- The Agricultural Health Study. This prospective study includes ~60,000 licensed pesticide applicators and 32,000 spouses of farmer applicators followed since 1993-7. NIEHS PI
- The Sister Study: Environmental and genetic factors in breast cancer and other diseases in women. This is a prospective study of 50,884 US and Puerto Rican women ages 37-74 at enrollment with a sister diagnosed with breast cancer. Extensive data and samples allow studies of gene-environment interactions in breast cancer and other outcomes in a genetically enriched population. PI
- The GuLF STUDY: This prospective study was designed to assess potential short- and long-term health effects of the oil spill following the Deepwater Horizon disaster in the Gulf of Mexico in April 2010. PI
- The Premenopausal Breast Cancer Consortium. Data from more than 20 international prospective cohorts have been harmonized to evaluate factors related to risk of developing breast cancer before age 55. Co-Chair
