

Available Citrix Options

After a successful Citrix Login, you will have three options on the green bar for Favorites, Desktops, and Apps.

To further explain some of the options on this screen, you will see the screen above that will show you any items that your credentials have access for. The default tab is the desktop tab. You will also notice two other tabs across the top, one being favorites and the other being apps. On the apps tab there will be published applications that your credentials have access to, and on the favorites tab there will be a blank screen. This can be used to add your most used applications or desktops so that you do not have to go and look in different locations for each of them. To add an icon to your favorites tab, click on the Details link beside the icon you wish to add and then click on Add To Favorites as shown below.

Now that you have added the icon to your favorites it will be added to your favorites tab.

If you add an icon you no longer wish to see just click on the Details link from the favorites tab and click on Remove. The application will then be removed from your favorites tab. To start the application simply click on the icon and the application will start.
