

## Workshop Description

*3/29/07 3:00 pm Workshop Block 3*

**21. Temporary traffic control in emergency response** (*AFSCME – William Marquardt*) *Track: Emergency/Disaster Response and Preparedness*

The objective of this session is to demonstrate that by training workers to design and develop a Traffic Control Plan (TCP) for handling traffic in an emergency response setting, the workers become empowered to take an active role in their own protection on the scene. They will learn what factors influence the design of the TCP, how to implement the design and how to evaluate the effectiveness of the traffic controls once they are put in place. The workshop will include demonstration of hands-on training tools and provide a technical update based on the latest FHWA regulations.
