

Workshop Description

3/29/07 10:45 am Workshop Block 1

3. Site characterization activity (*WRUC – Gloria Atemus*) *Track: Instructor Development*

The objective of this workshop is to identify the purposes of site characterization to provide information for the development of the site health and safety plan and to select appropriate levels of protection. The class will be broken into groups, given a scenario, and asked to gather information by picking 5 of 15 sources for Phase I of Site Characterization. With their choices, they then attempt to answer questions relating to site safety and equipment needed for on site work. In most cases they will not receive enough information to make entry. The class will learn the importance of gathering all the information available before moving to Phase II.
