

An Idea for Harmonization (Courtesy of Harvey)

Janelle Rios, PhD, MPH
UTHealth School of Public Health
Texas-Utah Consortium for Haz Waste Worker Training
Biosafety and Infectious Disease Training Initiative

What We Did – HIGHLIGHTS

1. Launched a UTHealth needs assessment
Results: FEMA center opened onsite
2. Student-staffed cot survey at mega-shelter with Baylor COM
Results: Potential respiratory disease outbreak thwarted
3. Supported response teams in minor to moderate ways – educational materials, PPE, a tiny bit of logistics

My Biggest Challenge

Unable to effectively assist my NIEHS colleagues in organization efforts:

- Trainers
- Trainer availability
- Available assets – Trainer skills, supplies
- Missing assets
- Match with training needs of the community

Several Reasons

Two big reasons:

We were busy.

I was busy.

A Potential (But Partial) Solution

- Online open document that is flexible, expandable and requires little oversight
- Roster – name, contact info., credentials or licensing, teaching expertise, other skills
- Calendar – trainer availability (when and where)
- Logistics – List of available supplies and equipment, and what's missing (by whom, when needed and where)
- Optional – Onboarding orientation, situation reports, out processing, health surveys

What do y'all think?
