Detection of CD3 in Formalin-Fixed, Paraffin-Embedded Mouse Tissue

Reagent and Antibody Information

1X Wash Buffer
3% Hydrogen Peroxide
1% BSA Diluent
1X Citrate Buffer (Rodent Decloaker)
Normal Rabbit IgG – Affinity Purified
DAB Chromogen
Hematoxylin

Blocking Solution: Rodent Block M (Ready-To-Use)
Biocare Medical

Catalog # RMR622
**Staining Procedure**

Positive Control Tissue: Spleen and thymus – T-cells  
Stain Localization: Cell membrane

1. Deparaffinize and hydrate slides through the following solutions:

<table>
<thead>
<tr>
<th>Solution</th>
<th>Repetitions</th>
<th>Time</th>
</tr>
</thead>
<tbody>
<tr>
<td>Xylene</td>
<td>2 times</td>
<td>5 minutes</td>
</tr>
<tr>
<td>100% Ethanol</td>
<td>2 times</td>
<td>3 minutes</td>
</tr>
<tr>
<td>95% Ethanol</td>
<td>2 times</td>
<td>3 minutes</td>
</tr>
<tr>
<td>1X Wash Buffer</td>
<td>2 times</td>
<td>5 minutes</td>
</tr>
</tbody>
</table>

2. Quench endogenous peroxidase by placing the slides in 3% hydrogen peroxide for 15 minutes.

3. Rinse the slides in 2 changes of 1X wash buffer for 5 minutes each.

4. **Heat-Induced Epitope Retrieval Using The Decloaker**
   - Add 500 ml of distilled water to the pan inside the decloaker.
   - Place a full rack of slides into a Tissue Tek® container with 200 ml of 1X Rodent Decloaker (Insert blank slides into any empty slots in the rack to ensure even heating of slides)
   - Place the container stably inside the pan and decloak for 5 minutes. *Maximum Pressure _______* Depressurize for 10 minutes.
   - Remove pan top and cool for 10 minutes. *Temperature Before Cooling Slides__________*
   - Rinse the slides in 2 changes of distilled water for 3 minutes each time.

5. Rinse the slides in 2 changes of 1X wash buffer for 5 minutes each time.

6. Block with the Rodent Block M reagent for 20 minutes at room temperature.
   - Lot #__________ Exp. Date________________

   DO NOT RINSE SLIDES WITH BUFFER BEFORE ADDING PRIMARY ANTIBODY.  
ONLY WIPE EXCESS BLOCK.

7. Apply primary antibody at a 1:300 dilution. Incubate for 1 hour at room temperature.
   - Lot #__________ Exp. Date________________

For negative control slides, dilute normal rabbit IgG so that it’s IgG protein concentration matches that of the primary antibody (if necessary). Then make a 1:300 dilution. If the concentrations can’t be matched using this method, the dilution for the negative reagent may need to be adjusted. Apply the negative and incubate for 1 hour at room temperature.
   - Lot #__________ Exp. Date________________

8. Rinse the slides in 2 changes of 1X wash buffer for 5 minutes each.

9. Apply the Rabbit-on-Rodent HRP-Polymer reagent, and incubate for 30 minutes at room temperature.
   - Lot #__________ Exp. Date________________
10. Rinse the slides in 2 changes of 1X wash buffer for 5 minutes each.

11. Apply the DAB chromogen. Incubate in the dark for 6 minutes at room temperature.
   (Add 1 drop of DAB per ml of substrate)
   Lot #_________________ Exp. Date_________________ New Kit: yes / no

12. Rinse the slides in tap water 3 minutes.

13. Counterstain with hematoxylin for 20 seconds.

14. Rinse the slides in tap water until water is clear.

15. Gently agitate slides in 1X wash buffer until the tissues turn blue.

16. Dehydrate through the following solutions:

<table>
<thead>
<tr>
<th>Solutions</th>
<th>Repetitions</th>
<th>Time</th>
</tr>
</thead>
<tbody>
<tr>
<td>95% Ethanol</td>
<td>1 time</td>
<td>3 minutes</td>
</tr>
<tr>
<td>100% Ethanol</td>
<td>3 times</td>
<td>3 minutes</td>
</tr>
<tr>
<td>Xylene</td>
<td>2 times</td>
<td>5 minutes</td>
</tr>
</tbody>
</table>

17. Coverslip
