Factors for Disease Flare in Adult and Juvenile Dermatomyositis and Polymyositis

- This is a research internet-based anonymous survey to try to understand factors that may contribute to increased myositis disease activity
- Eligible patients will
  - Have adult or juvenile dermatomyositis or polymyositis (or are parents of a childhood patient with dermatomyositis or polymyositis)
  - Are at least 1 year from diagnosis of myositis
  - Are 2-85 years of age
  - Can answer an online survey for 20-30 minutes

If you are interested in participating, go to: http://www.surveymonkey.com/s/environmentalexposureandflare

Your willingness to help us gather information is greatly appreciated!
