

Two-Year Postdoctoral Fellowship Positions Available

Center for Environmental Research and Children's Health (CERCH)
School of Public Health
University of California, Berkeley

The Center for Environmental Research and Children's Health (CERCH) at UC Berkeley is offering a 2-year post-doctoral fellowship in Maternal and Child Health Epidemiology with a focus on exposure to environmental hazards during pregnancy and childhood. CERCH is a research center working through community-based partnerships to investigate environmental exposures to future parents and children; evaluate their effects on child health, behavior, and development; and translate research findings into sustainable strategies to reduce environment-related childhood disease. CERCH is home to multiple research programs that would be amenable to postdoctoral research. (See <http://cerch.org/> for more information.)

The goal of this postdoc is to provide a strong candidate with additional skills in Maternal and Child Health Epidemiology. This position will provide two years of protected time to publish papers, develop a research plan, write grants, receive additional training, and prepare to enter the academic job market.

Requirements:

- Interest in environmental exposures and maternal and child health
- Interest in pursuing an assistant professor position
- Recently completed PhD or equivalent
- Must be a US citizen or permanent resident
- Because this position provides training in both Epidemiology and Maternal and Child Health, a specific background in these areas is not required.

Start Date: will accept applications until filled.

To Apply: Send CV, a cover letter describing your interests, and three names of reference to: Brenda Eskenazi, PhD, eskenazi@berkeley.edu; put "MCH epi postdoc" in subject line.
