Worker Training Program

NIEHS Environmental Career Worker Training Program

Program Goals

The **National Institute of Environmental Health Sciences (NIEHS) Environmental Career Worker Training Program (ECWTP)** provides training to increase opportunities for individuals from disadvantaged communities to obtain careers in environmental cleanup, construction, hazardous waste removal, and emergency response.

Disadvantaged communities include those that are traditionally burdened by economic distress (unemployed or underemployed), health disparities, or hazardous environmental conditions.

The NIEHS ECWTP funds nonprofit organizations, or grant recipients, to deliver both pre-employment and life skills training. The program's goals are to increase sustainable employment opportunities, promote economic development, address occupational health disparities, and advance environmental justice. Through these mission-oriented goals, the program has and continues to transform the lives of trainees, as well as their families and communities.

ECWTP is proud to be selected as a participant in the new [Justice 40 Initiative](#). ECWTP was selected because of its strong track record of helping people experiencing underemployment or unemployment, people experiencing homelessness, and people who were previously incarcerated find good jobs and become productive members of society.

Program Overview

In 1995, the NIEHS Worker Training Program launched the Minority Worker Training Program, which is known today as the ECWTP. Since the beginning of the program, grant recipients have trained more than 14,500 workers with an average 70% employment rate. Even during periods of high unemployment across the U.S. in 2018 and 2019, the program was able to accomplish 74% and 77% employment, respectively.

Grant recipients partner with local unions, employers, and community-based organizations in various communities across the U.S. Each grant recipient provides training to empower workers with the skills, knowledge, and resources needed for placement and success in environmental careers. Upon program completion, graduates go on to obtain green careers (e.g., solar and wind energy) or careers in hazardous waste cleanup and transportation, emergency response, construction, and carpentry. With new skillsets, graduates become experts in their field and leaders in their respective workplaces and communities.

Percent of ECWTP Trainees Employed by Year

* Training and employment impacted by COVID-19 restrictions.

The ECWTP carefully tracks the number of people who enroll (trainees) as well as the number of people who complete training programs (graduates). This bar chart reflects percent of overall trainees employed by year; the assumption is that all trainees benefit from the skills and experienced gained through the ECWTP, even if they do not graduate.

Program Grant Recipients, 2020-2025

Program grant recipients are building capacity in many underserved communities and target areas across the U.S. through education, training, and worker empowerment.

- **CPWR – The Center for Construction Research and Training:** Targeting East Palo Alto, California; Flint, Michigan; New Orleans, Louisiana; and Boston, Massachusetts.
- **Atlantic Center for Occupational Health and Safety Training:** Targeting metropolitan areas surrounding New York City and Newark, New Jersey.

- **Western Region Universities Consortium:** Targeting metropolitan areas of Los Angeles, California; Portland, Oregon; and various tribal communities in Anchorage, Alaska, as well as other parts of the state.
- **OAI – Opportunity, Advancement, and Innovation in Workforce Development:** Targeting Chicago, Illinois; Dallas, Texas; Kansas City, Missouri and Kansas; and Indianapolis, Indiana.
- **Deep South Center for Environmental Justice/Historically Black Colleges, Universities, Communities Consortium:** Targeting New Orleans, Louisiana; Houston, Texas; Pensacola, Florida; and Detroit, Michigan.
- **Sustainable Workplace Alliance:** Targeting the city of Orlando and Brevard County, Florida and San Juan, Puerto Rico.

Life Skills & Pre-Employment Training

Many trainees come into the ECWTP with significant barriers to obtaining employment. Participants may have little to no formal education, training, or job experience. Having a history of incarceration is also a significant barrier to employment and is more common in disadvantaged communities.

To address these barriers, grant recipients provide pre-employment and life skills training. This training is a hallmark of the ECWTP and is fundamental to trainees’ success. Pre-employment training is offered through apprenticeships or other

models to ensure that trainees obtain the health, safety, and technical skillsets needed for placement in a career of interest. The life skills training addresses concepts about time management, conflict resolution, and other topics related to professional development.

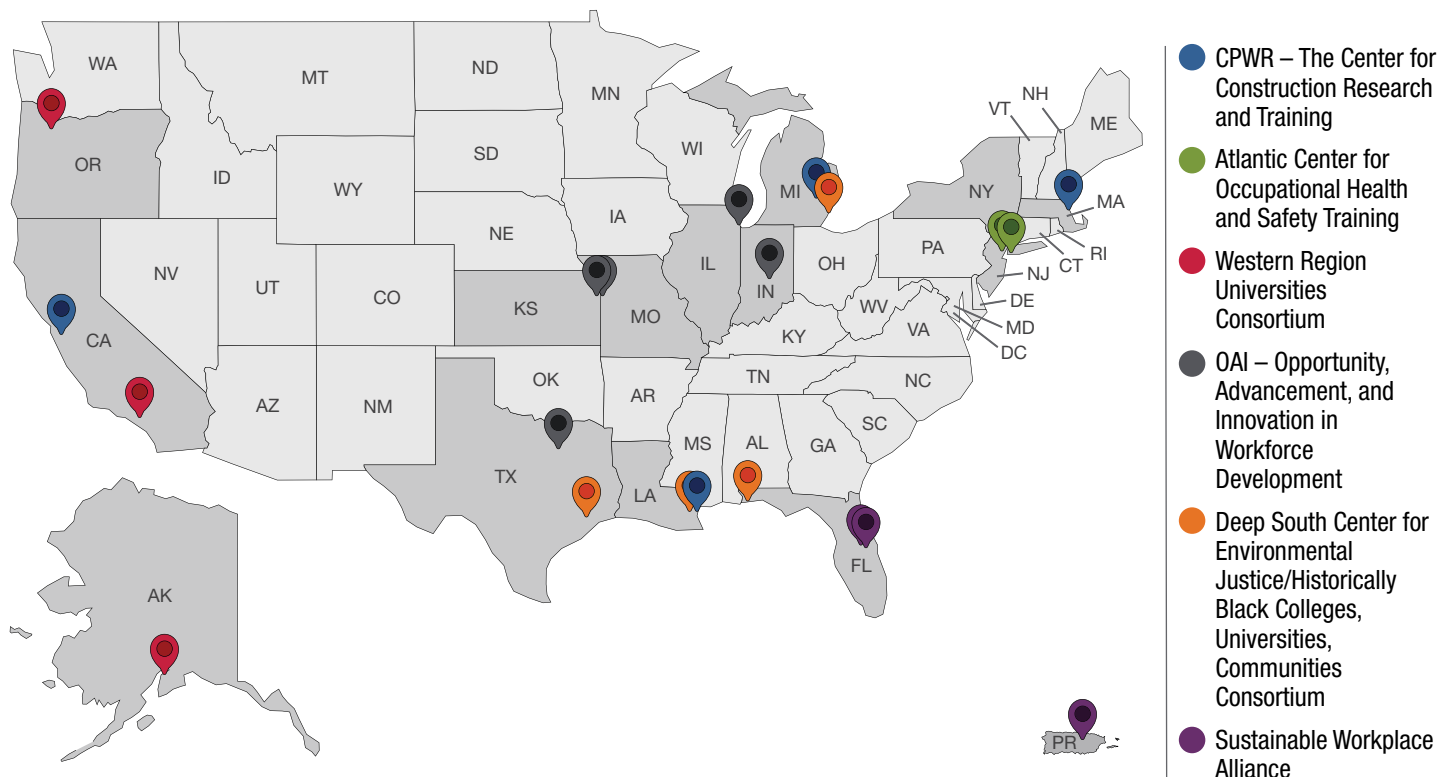

Some ECWTP grant recipients work with probation offices to enroll people who were previously incarcerated in training programs that will help them build skills in a trade. This training offers an alternative to costly incarceration, supports rehabilitation among the formerly incarcerated, and helps reduce recidivism. This recidivism reduction effect was demonstrated in the 2024 ECWTP economic impact study, which determined that the program resulted in \$42.9 million in crime cost savings from 2014-2022.

\$42.9 million

in crime cost savings

(recidivism reduction effect)

Social support through mentoring and counseling services is also vital for trainees’ success. Many ECWTP grant recipients offer financial literacy and empowerment courses to help trainees make informed decisions about their budget and finances. Other services include counseling surrounding personal and family circumstances.

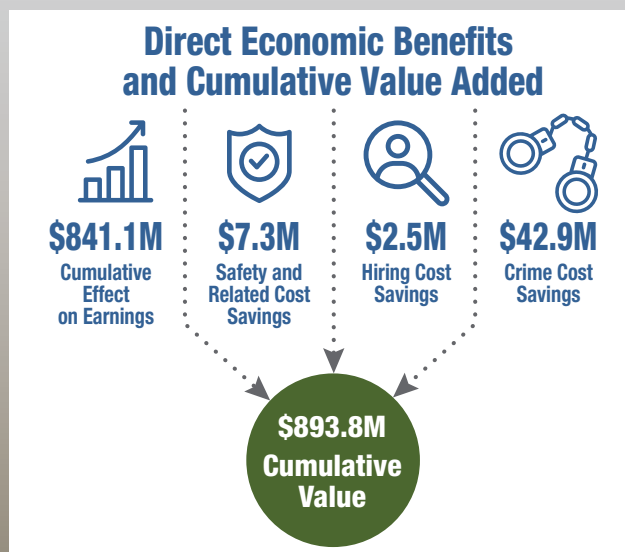

Map shows target states (dark gray) and cities (location pins) reached by 2020-2025 ECWTP grant recipients.

Return on Investment*

According to a [2024 impact study](#), the ECWTP led to a direct monetary benefit of approximately \$893.8 million to the economy from 2014 to 2022. In addition, the ECWTP:

- Resulted in \$841.1 million in higher earnings for graduates (due to increased likelihood of employment, more hours worked, and higher wages).
- Had approximately 80% of its graduates placed in jobs.
- Returned approximately 28 times that amount of money invested into the ECWTP by the federal government back into the economy.
- Resulted in \$42.9 million in crime cost savings related to victimization and incarceration (recidivism reduction effect).

*The economic impact study used ECWTP data from 2014 to 2022.

Local Partnerships are Key to Success

Each grant recipient has established partnerships with labor unions, employers, community-based organizations, and others within and around their target areas. These partnerships are key for success of the ECWTP. A few examples of how these partnerships have benefitted the program, trainees, and graduates are listed below.

- **Engagement with local partners and stakeholders help form advisory boards.** Advisory boards are critical for program sustainability and growth. They operate on a volunteer basis and typically include community leaders, employers, community-based organizations, state and local governments, former students, and union representatives. They reflect the populations that the ECWTP serves, as well

as the industries the programs look to for job placement. Advisory boards have been instrumental for instructional assistance, technical resources, program guidance, and employment opportunities for ECWTP graduates.

- **Partnerships with local businesses help establish hiring agreements.** Due to the reputation of ECWTP graduates' knowledge and skillsets, some employers have established first source hiring agreements with grant recipient training programs. For example, CPWR's partnership with JobTrain in East Palo Alto, California helped initiate a project labor agreement with the San Francisco Public Utilities Commission (SFPUC). This agreement ensures that ECWTP graduates are first in line for referral to fill open positions at SFPUC job sites.
- **Partnerships with labor unions make apprenticeships possible.** The apprenticeship model provides a way for trainees to gain skills in a specific trade like construction or carpentry, and to advance their career as they gain experience. For example, the New Jersey-New York Hazardous Materials Worker Training Center has a long-standing partnership with the New York City District Council of Carpenters Training Center to offer the BuildingWorks Pre-Apprenticeship program. BuildingWorks prepares and helps trainees move into a unionized apprenticeship, where they gain skills to build a long-term career in construction trades as a master carpenter.

Building Careers & Changing Lives

The year 2020 marked the [25th anniversary of the ECWTP](#). Reflecting on success stories from graduates, it is evident that the program has and will continue to make a lasting impact on underserved individuals and communities across the nation. To hear personal accounts from two ECWTP graduates, listen to the NIEHS Environmental Health Chat [podcast series](#).

Creating a Financial Future

A. Coleman completed the [BuildingWorks](#) Apprenticeship program led by the [New Jersey/New York Hazardous Materials Worker Training Center](#) and the New York City District Council of Carpenters Training Center in 2018. Before Coleman enrolled in the program,

he was earning minimum wage, had unstable housing, and had previously been incarcerated. He is now a journeyman and currently earns over \$100,000, has purchased a home, and paid for his child's education. Coleman stated that he is very confident about his financial future and has investments in addition to retirement savings.

Building Hope from Within

When E. Watson joined [Constructing Hope](#), a partner program of the [Western Region Universities Consortium](#), she was dealing with addiction and struggling to find life direction. Watson worked diligently and quickly progressed in the 10-week training course. After graduation, Constructing Hope supported Watson in preparing for interviews and gaining employment. She later obtained an apprenticeship with the Carpenter's Institute earning \$18.46 per hour.

When asked what makes Constructing Hope effective, Watson emphasized the importance of relationships. "The most important thing was the relationships that I formed with the staff and the amount of support they gave me," she said. "I could tell them anything and they never looked down or judged me. You can tell the people are there because they care, and they want to see their community succeed."

Grateful for Safety Training

In 2007, T. Sturdivant was 31, unemployed, and had a family including two small children to support. He had no vocational experience and found it challenging to obtain consistent, meaningful work. He entered the apprenticeship program with the Operative Plasterers and Cement Masons International Association (OPCMIA) Local Union 633, where he later became a journeyman. Today, he serves as a business agent for OPCMIA Local Union 633 with duties such as organizing and serving as a liaison between members and contractors. He now serves on a variety of state, industry, and contractor association committees and gives back to the next

generation of trainees by sharing his story with each pre-apprentice cohort at Local 633.

Sturdivant said the ECWTP was life-changing, providing him with an opportunity to pursue a sustainable and meaningful career in the construction industry. "I'm grateful for the career this program gave me but the safety training is what keeps you in the career," he said.

Developing a Strong Work Ethic

J. Alvarado was previously incarcerated, earning less than \$11,000 a year, receiving SNAP benefits, and living in public housing. He graduated BuildingWorks and finished his apprenticeship in 2019.

He is currently a journeyman carpenter. During the program, Alvarado stated he learned and developed a strong work ethic. He said the carpentry instructors taught him that if you do everything correct and work hard, eventually you will get more efficient, work faster and safer, and he has experienced this on the job. Alvarado has worked on many job sites throughout the New York City area including public housing buildings. He regularly visits BuildingWorks classes and speaks to students about his experiences. He also looks out other for BuildingWorks graduates on the job site.
