Learning Assessment

Level 3
Training Impact Assessment

HOW YOU CAN HELP

1. Do you have a need for training?
2. Should we meet someone in your network?
3. Should we partner?

Contact Eulando Piñero, Program Manager
eulando@sustainablewp.org

2. Can you describe your prior training and existing community partnerships with emergency response organizations in the target community? Have you developed contact lists of local emergency responder groups?

3. Have you assessed disaster training needs and local disaster hazards with local community partners and have you had their involvement in the training process?

4. Have you developed training outcome measures related to how your training will improve the safety and response capacity of local responders and community members?

5. Would you be interested in partnering with the Clearinghouse to convene with multiple relevant stakeholders at the local, state and regional levels to assure integration with the existing emergency preparedness, response and recovery infrastructure, augment recruitment of potential response and recovery workers for the training, and create more public awareness of NIEHS-supported training efforts?

Courses	Students	Training Contact Hours

20 hurricanes in five years

3,837 earthquakes in the past 365 days

On average, there are about 5 earthquakes recorded per day

one-third of the island is at high risk for landslides

Hurricane Maria hit Puerto Rico in 2017, it triggered more than 70,000 landslides

Approximately, 15% of Puerto Rico (524,469 people) lives in areas subject to flooding

66.7% of the population reside in coastal areas, will likely face more intense and frequent hurricanes

Hurricane Maria. The death toll was originally reported as 64 and has been revised by Governor Ricardo Rosello to 2 975 but the 2018 Harvard survey study estimated that perhaps as many as 4 645 fatalities had occurred

About 34% of Puerto Ricans reported having fair or poor health (18% mainland US)

Asthma rate is 12.2%; the mainland's is 9.4%.

Puerto Rican children are three times as likely to have asthma, as compared to non-Hispanic whites
